

Els Vilella

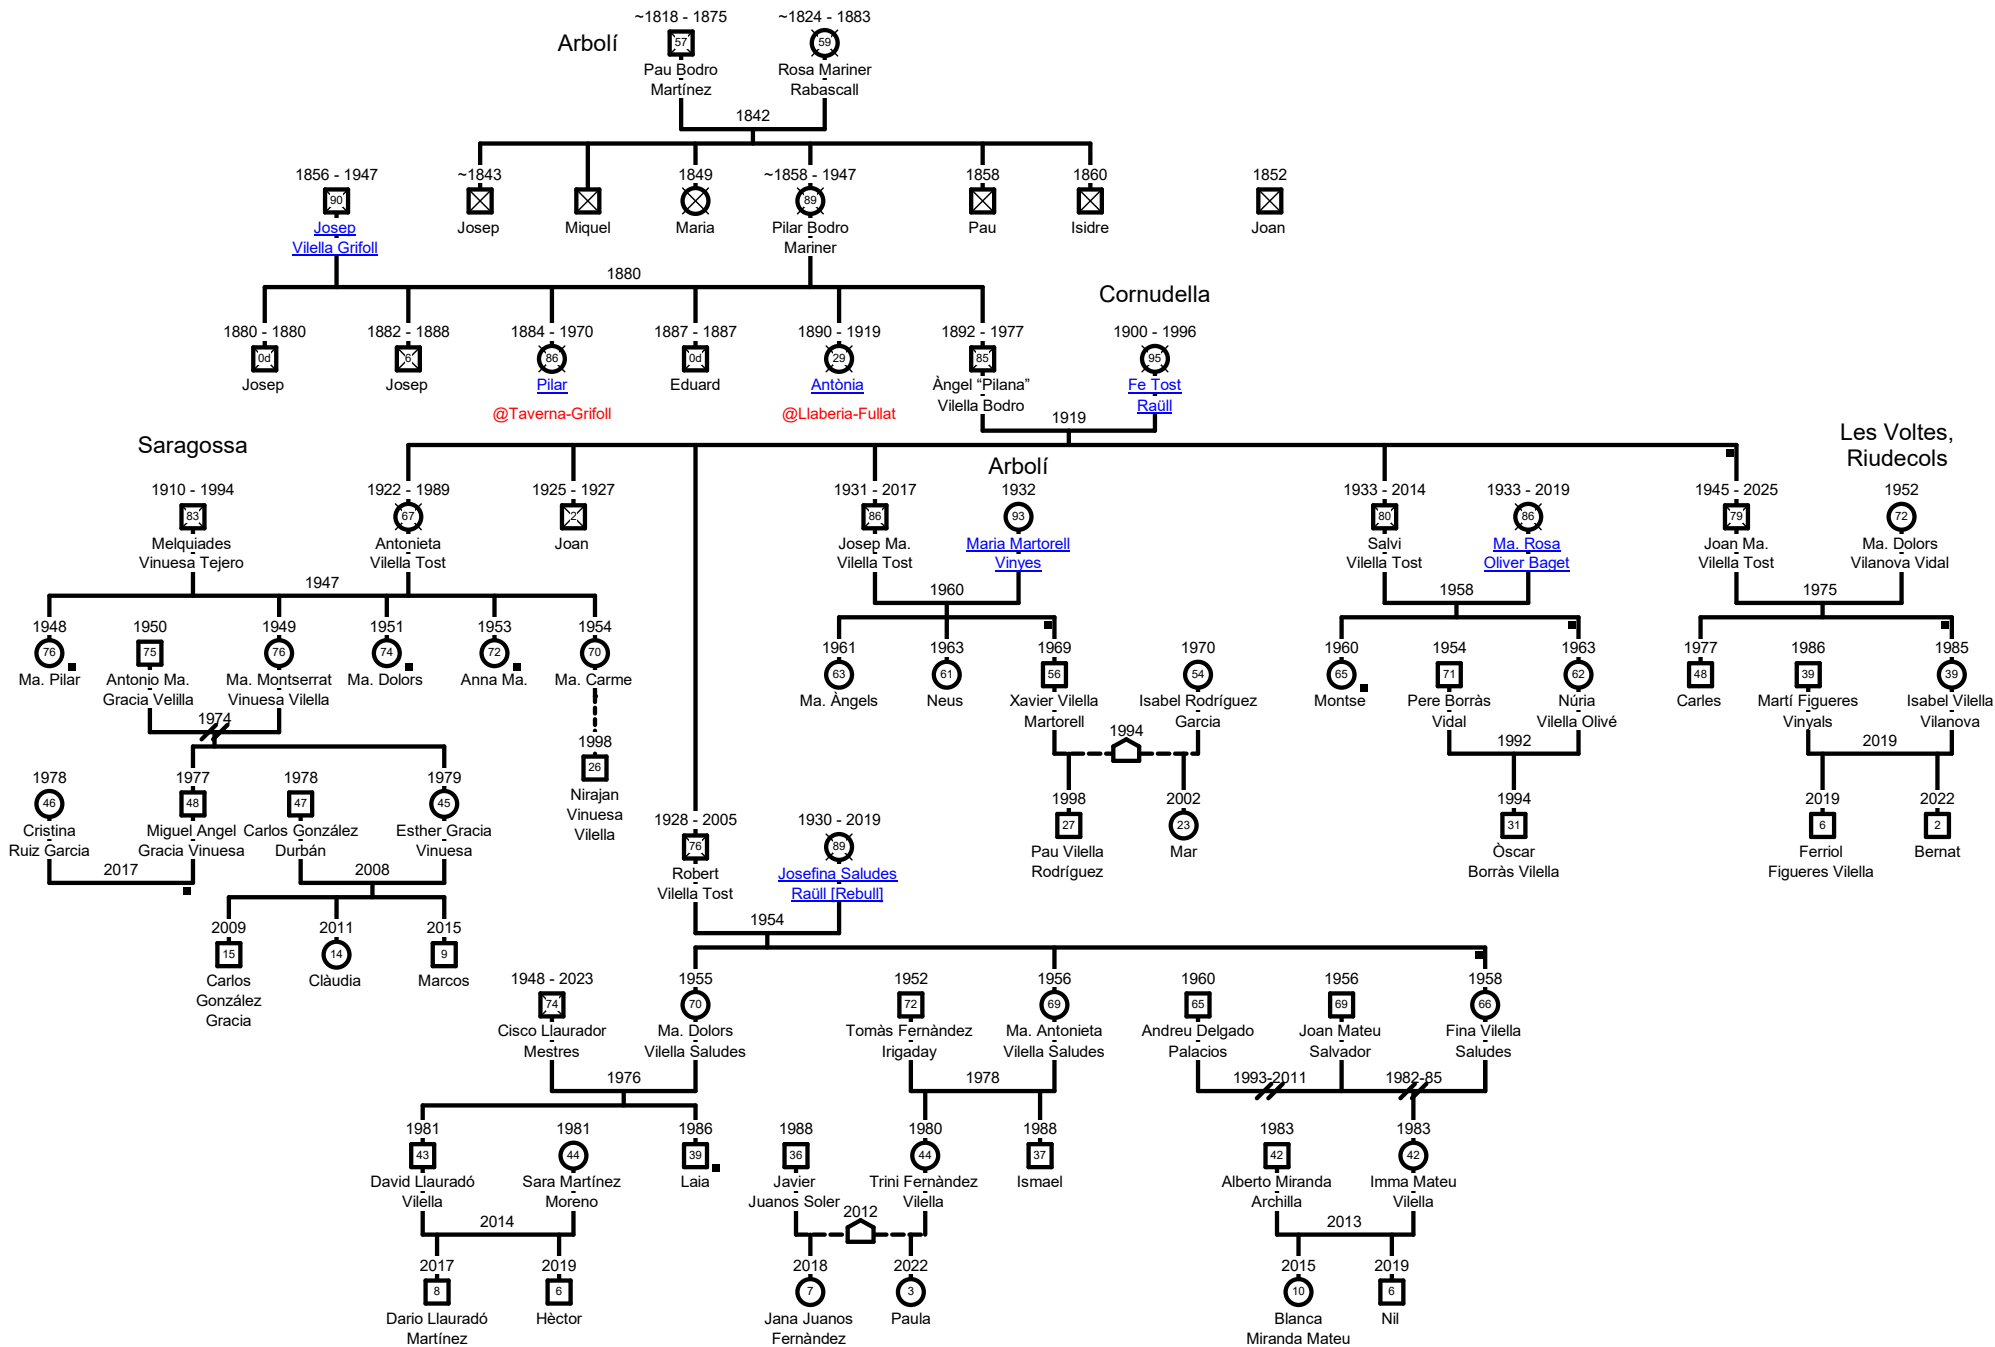

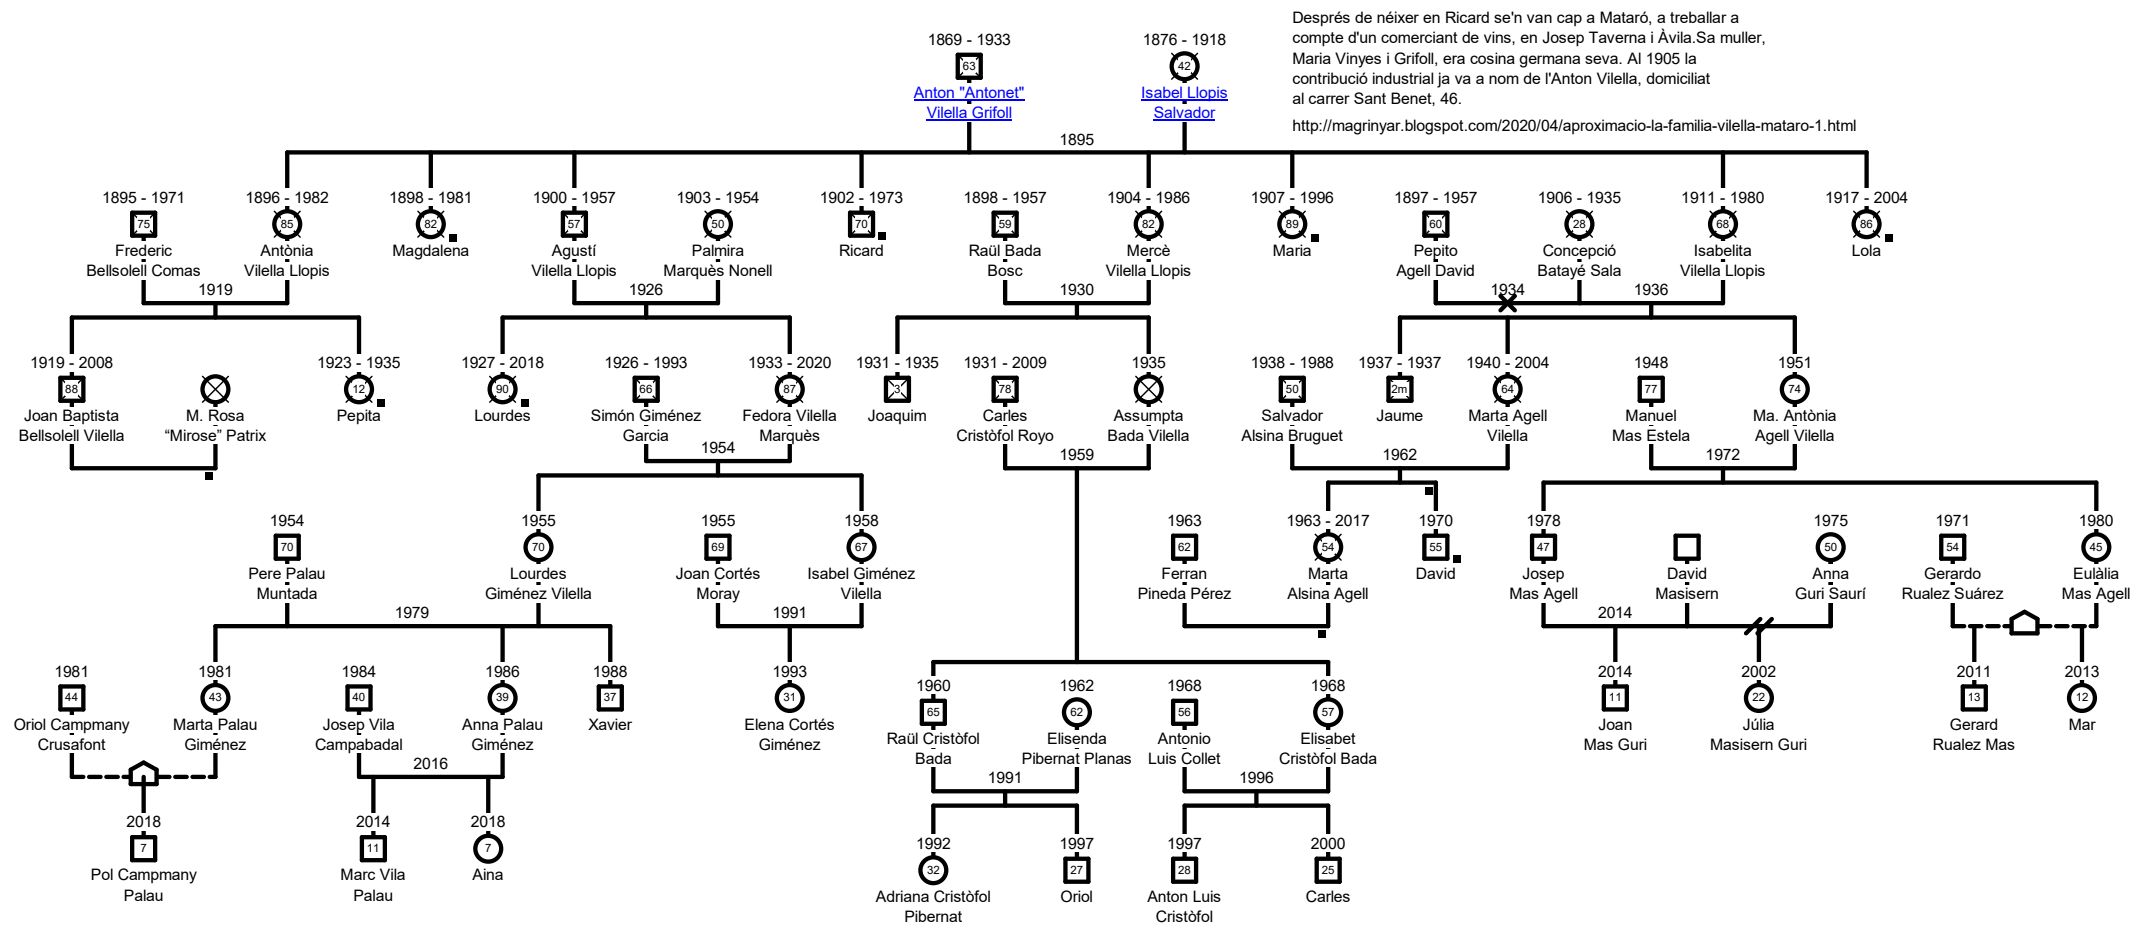

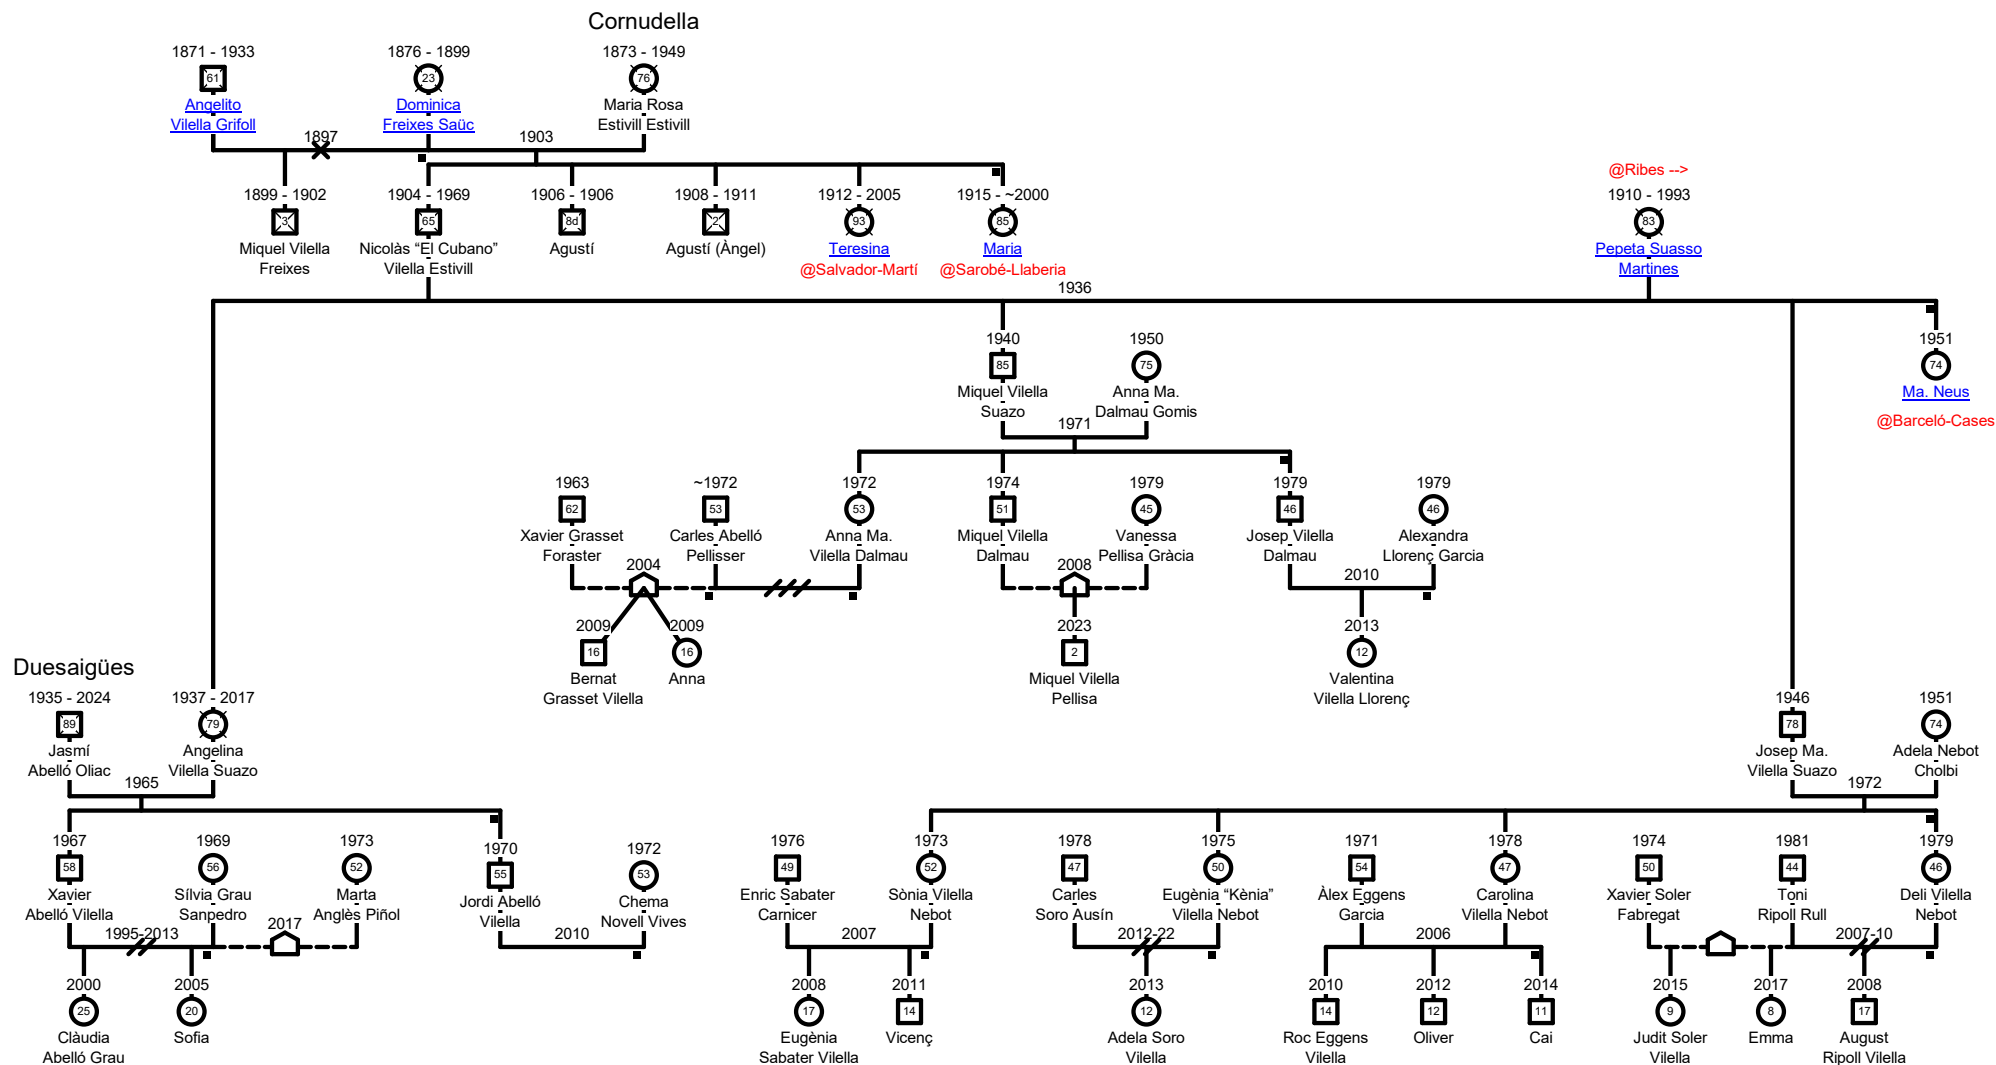

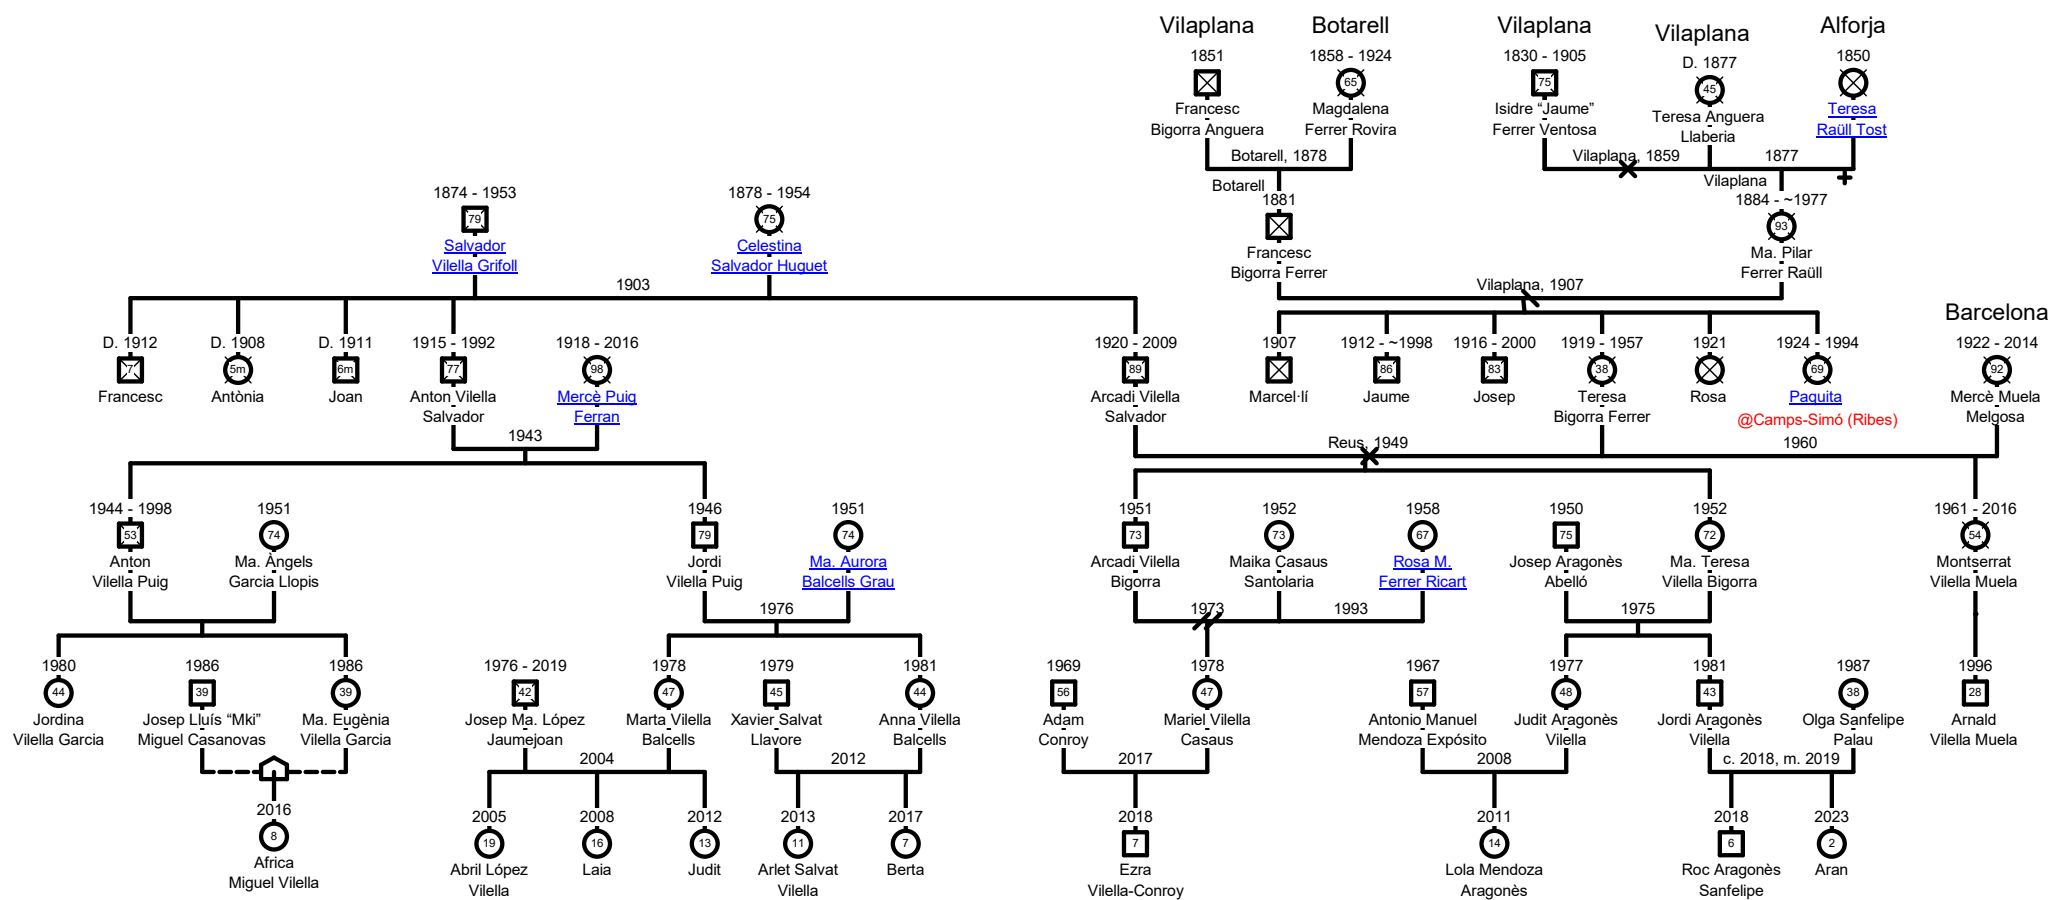

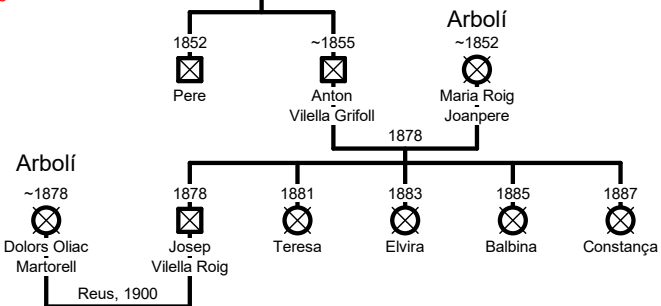

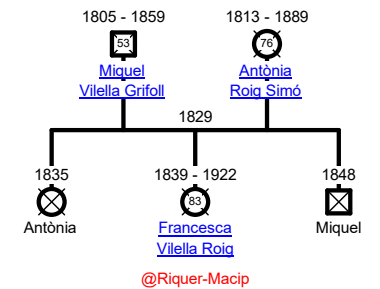

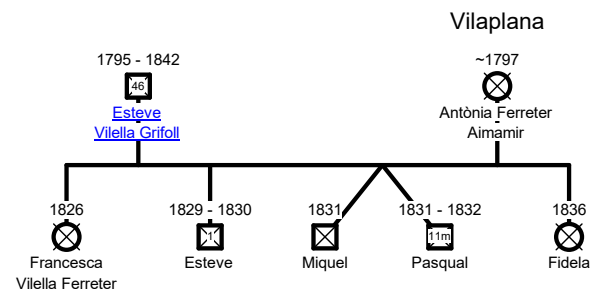

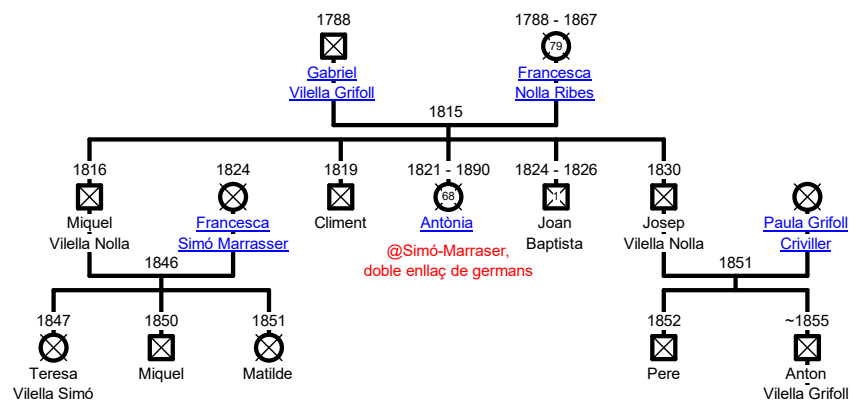

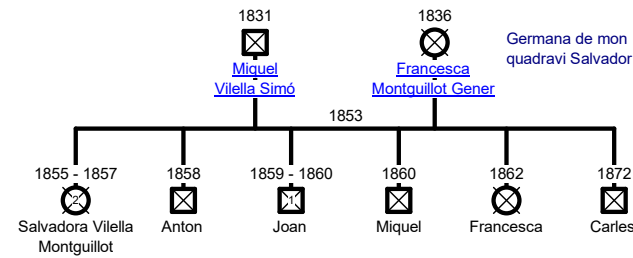

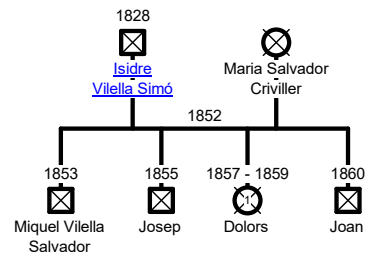

L'ofici de MESTRE DE CASES designava els artesans que es dedicaven a construir habitatges o edificacions de caràcter semblant. Sabien fer fonaments, bastir parets, obrir portes i finestres en els murs, tancar edificis amb sostres i terrasses i algunes altres activitats relacionades amb la professió. Treballaven amb pedra, pedra picada, tàpia, maons, rajoles, argamassa, guix, calç, teules i altres materials relacionats. També els era imprescindible treballar amb fusta, en elements finals de construcció (bigues, cairats, marcs de portes i finestres...) o en elements transitoris (bastides, grues, cintres...).
